EDUCATION

York University

Toronto, ON

Bachelor of Science in Computer Engineering, Minor in Computer Science

Expected December 2028

- **Relevant Coursework:** Object-Oriented Programming, Discrete Mathematics, Linear Algebra, Calculus, Operating Systems

Humber College — 4/5

Toronto, ON

Computer Programming and Analysis

January 2023 - December 2025

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Database Systems, Advanced Database Programming, Networking, Web Development, Cross-Platform Development,
- **Honours:** Dean's Honour List

RELEVANT EXPERIENCE

Intern

Barrie, ON

ScotiaBank

Jan 2026 – Mar 2026

- Collaborated with the scrum team to ensure sprint goals were achieved, and deliverables met quality standards to be submitted by the project manager.
- Reviewed issue logs and defect reports to ensure a smooth and successful software release.
- Completed 200+ hours of software engineering work, contributing to full-stack development, debugging, and performance optimization.
- Worked with cross-functional teams to gather requirements and implement new features across both frontend and backend, ensuring seamless integration and functionality.

PROJECTS

Metsi (Startup) | *React Native, Expo, Firebase, Gemini API, MongoDB, Websockets*

Jan 2026 – Present

- Developed an **OCR scanner** using Google ML Kit to extract and transcribe text from images into structured notes. optimizing load times for improved performance.
- Enhanced note collaboration performance by implementing real-time data synchronization using **Socket.io**, enabling multiple users to edit concurrently.
- Built an intuitive, user-friendly UI that improved readability and navigation, increasing performance, response time and boosting user engagement by 60%.
- Engineered the backend and strengthened application security by protecting API routes with Firebase Authentication tokens, ensuring secure user session management.

Ameer AI | *Typescript, Vite, Go, MongoDB, Google Maps API, Gemini API*

April 2026 – May 2026

- Trip budgeting agent to travel with and navigate wherever and whenever. It provides real-time navigation, route planning, and smart budgeting assistance and calculation. By integrating the Google Maps API, users can travel safely and reliably.
- Implemented **reverse geocoding** using Go to accurately track and process users' real-time geographic locations through API integration.
- Integrated the Gemini API to build an AI agent **Ameer**, for more specific and personalized travel guide and budgeting assistance, increasing user engagement and session retention by 80%

TECHNICAL SKILLS

Languages: Python, HTML, C/C++, JavaScript, TypeScript, Java, PHP, SQL, Go

Frameworks: React, Vue, Next.js, Flask, Django, Express.js, Node.js, Spring Boot

Databases: PostgreSQL, MongoDB, MySQL

Developer Tools: AWS, Jenkins, Google Cloud, Azure, Docker, Linux, Git, Figma

ERP / Testing: SAP, Oracle ERP, Postman, Selenium, JUnit, PyTest

Applications: Visual Studio Code, GitHub, Docker Desktop, MongoDB Compass
